Executive Summary

This deliverable presents the specifications of all components and user interface as well as APIs descriptions and detailed description of the functionalities alongside with their features and workflows. Additionally, software and hardware requirements of the envisaged CAREPATH platform and a draft of the support level are provided in this deliverable. All these descriptions were gathered, designed and developed in Task 2.3 based on input from T2.1 and T2.2. Task 2.3 was conducted in close collaboration with WP3 and WP6 which are working the elicitation and design of clinical guidelines.

The final application development of the CAREPATH platform components is based upon these specifications. These specifications presented herein implement elicited CAREPATH user requirements and will serve as input for the development and deployment of the CAREPATH system and will be evaluated in the pilot studies of WP5.
